A- INSTALLATION

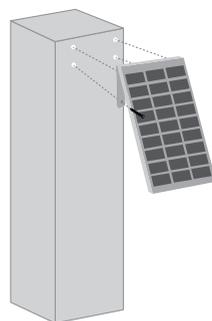

1

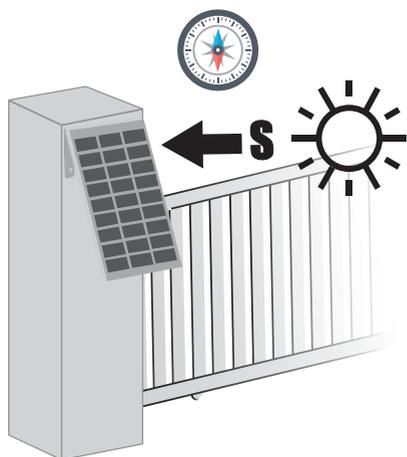

2

3

4

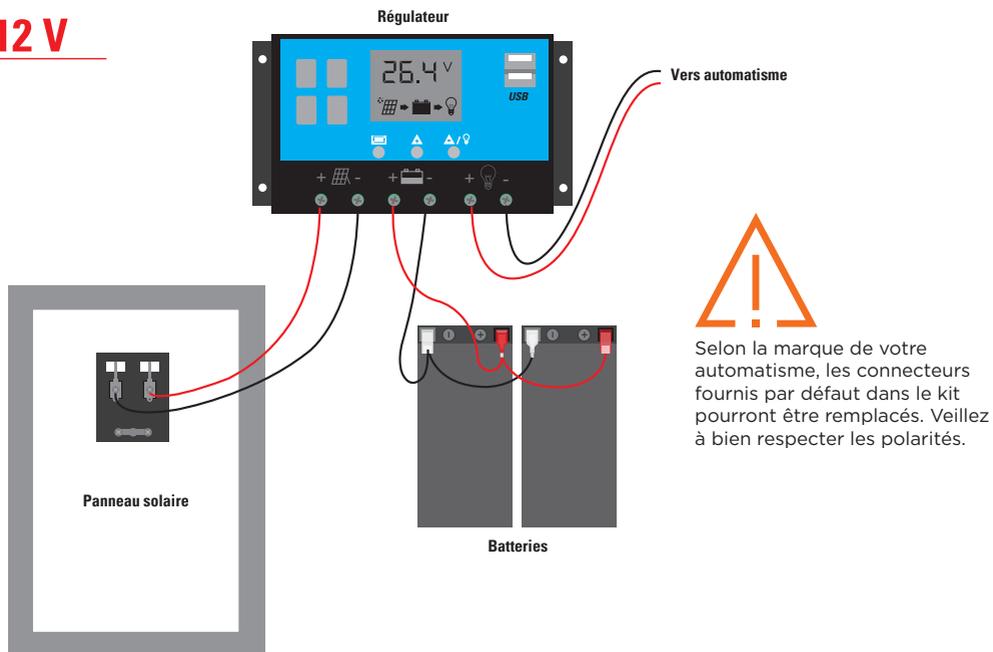

Installation
plein sud
obligatoire

Le panneau ne doit jamais
être exposé à l'ombre

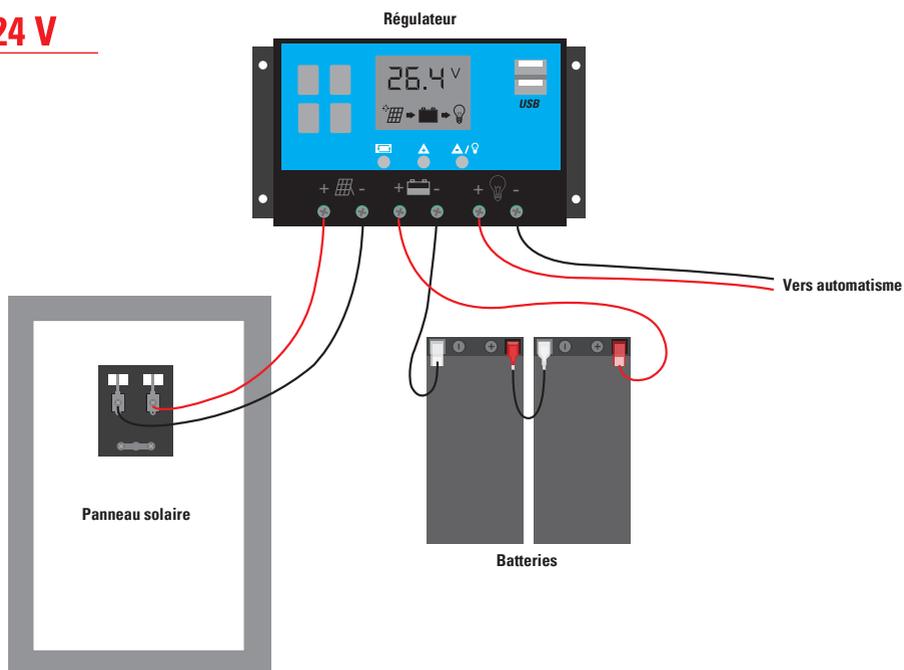

Chargement : 8h de plein soleil

B- BRANCHEMENT GÉNÉRAL (MULTI-MARQUES)

12 V

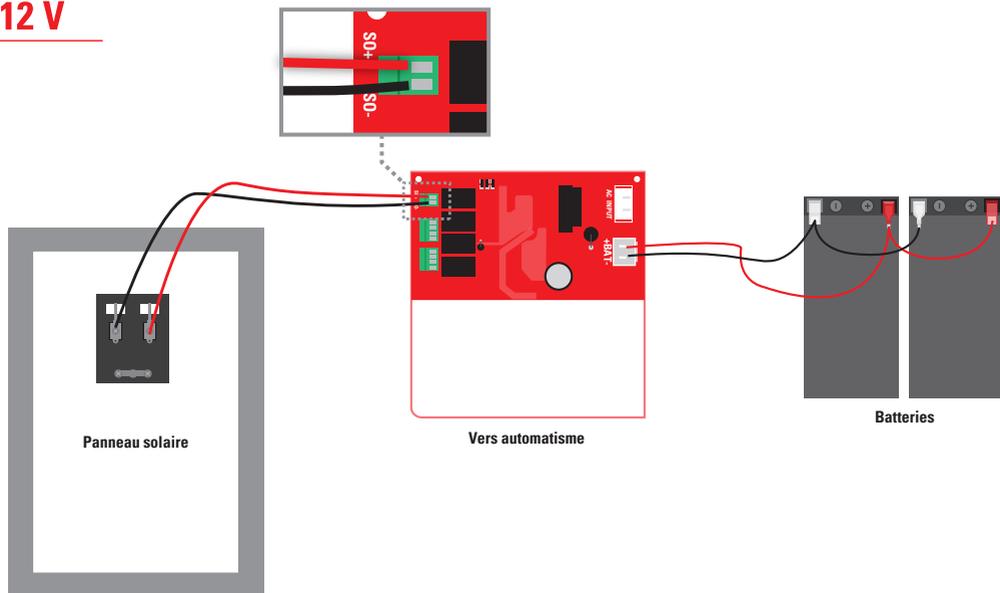

24 V

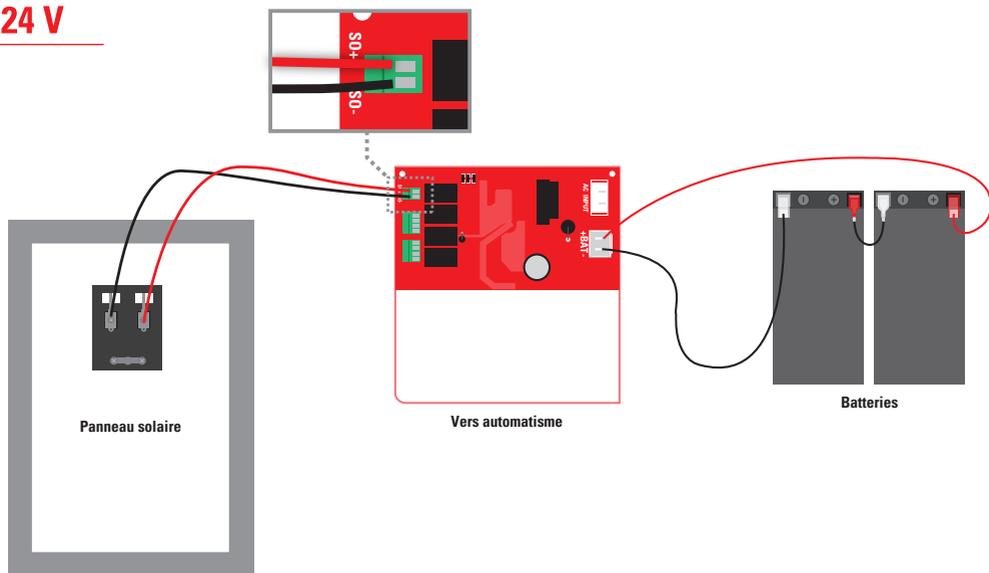

C- BRANCHEMENT SPÉCIFIQUE AVEC MOTORISATION SCS SENTINEL

Modèle 1 et 2 - portail battant platine P100 PCB1 - P100 PCB2

12 V

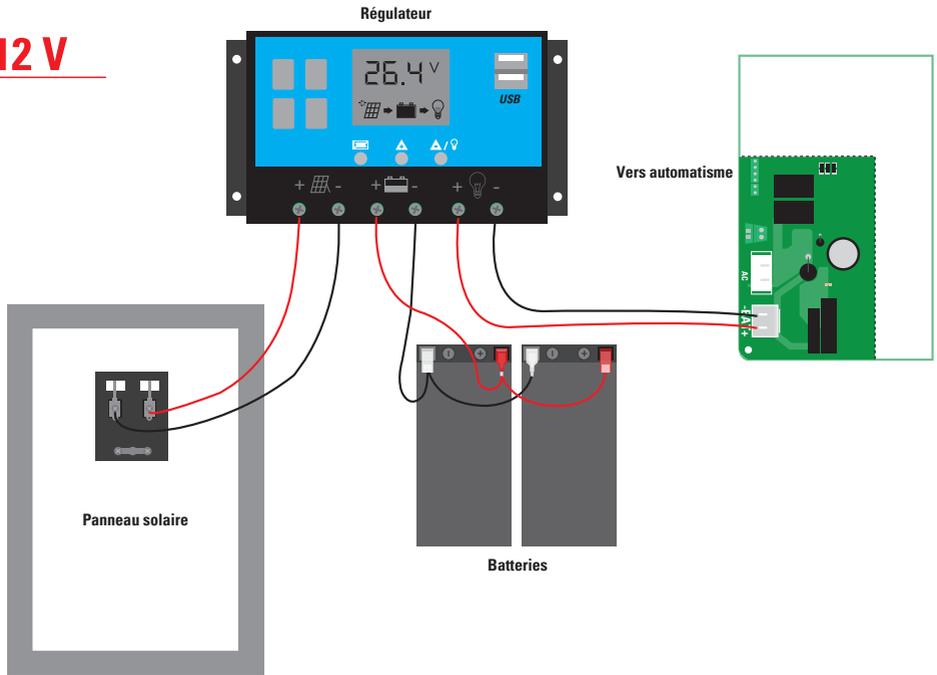

24 V

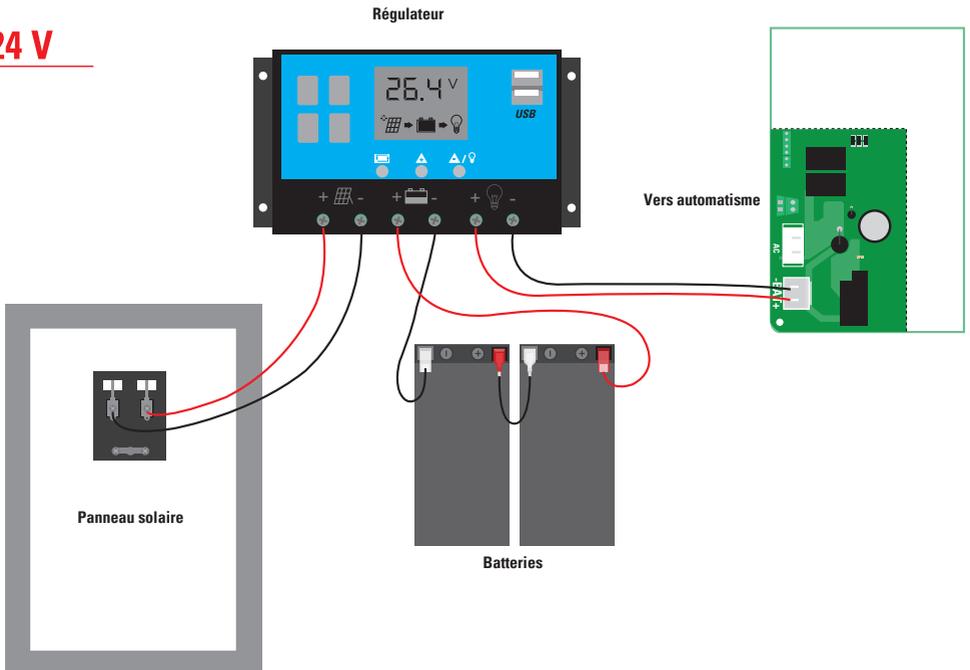

Modèle 3 - portail coulissant platine P501 BH

12 V

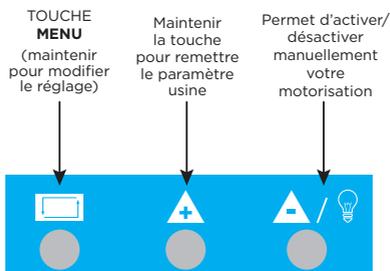

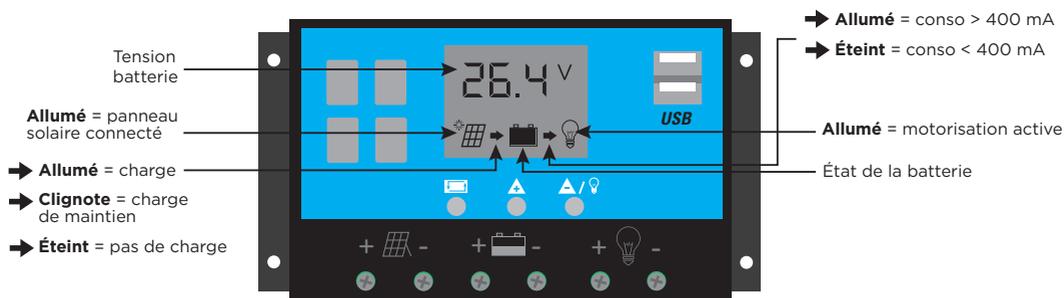

24 V

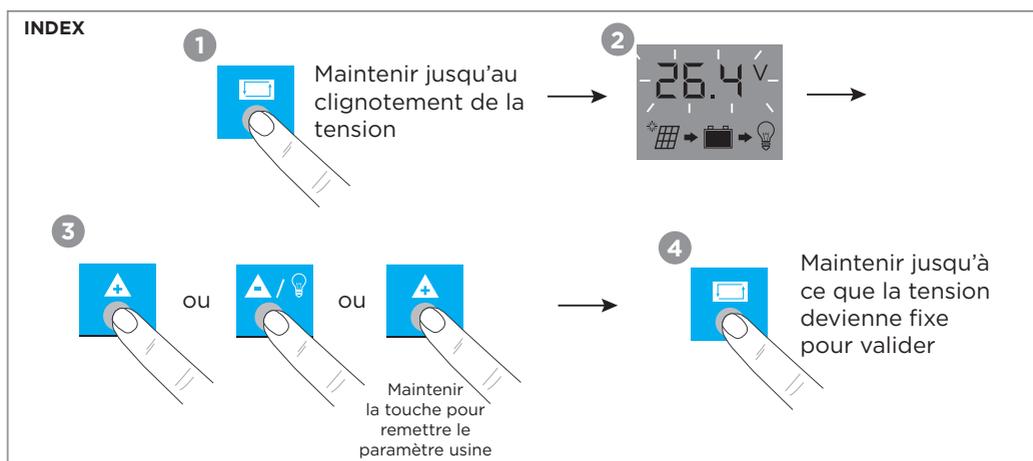

D- UTILISATION

VOIR INDEX pour réglage

Cliquer pour passer d'un menu à l'autre

4 Seuil de la tension de désactivation de la motorisation

VOIR INDEX pour réglage

5

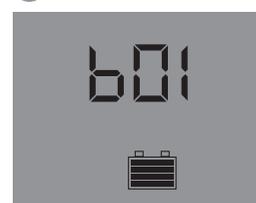

Cliquer pour passer d'un menu à l'autre

Ne pas modifier ce réglage

Cliquer pour passer d'un menu à l'autre

6

VOIR INDEX pour réglage si changement autre modèle de batteries

601 = batteries SolarGate
Tension 14,4V

602 = batteries au gel
Tension 14,2V

603 = batteries humide
Tension 14,6V

E- AIDE AU DÉPANNAGE

Problème	Solution
La tension des batteries est faible (>22V) et le témoin  est éteint	Déconnecter l'automatisme du régulateur, puis attendre. Ne rebrancher l'automatisme que lorsque la charge est redevenue normale ou réorienter votre panneau solaire de manière à ce qu'il soit mieux exposé aux rayons du soleil.
Les batteries ne tiennent pas la charge	Vérifier la consommation courant au repos de votre automatisme qui doit être < 40 mA, et vérifier l'exposition du panneau qui ne doit jamais être à l'ombre et orienté plein sud.

F- ASSISTANCE TÉLÉPHONIQUE

En cas de besoin, vous pouvez prendre contact avec notre assistance technique au numéro ci-dessous

0 892 350 490

Service 0,35 €/min
+ prix appel

Horaire hotline, voir sur le site internet : scs-sentinel.com

Nous vous demandons au préalable de relever la référence de votre matériel sur la notice ou l'emballage de votre produit. Nous vous conseillons également de brancher votre matériel « en fils volants » sur une table après avoir démonté les éléments afin de facilement déterminer si c'est le matériel ou l'installation qui pose problème.

G- GARANTIE

N'oubliez pas d'enregistrer votre garantie dans le mois suivant votre achat en vous rendant sur notre site internet : www.scs-laboutique.com/accountProduct/declaration.

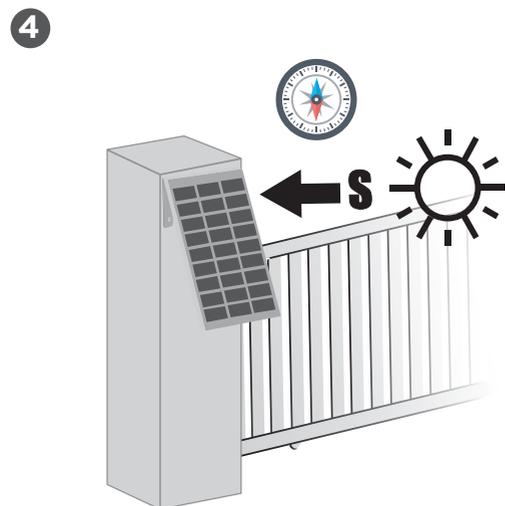

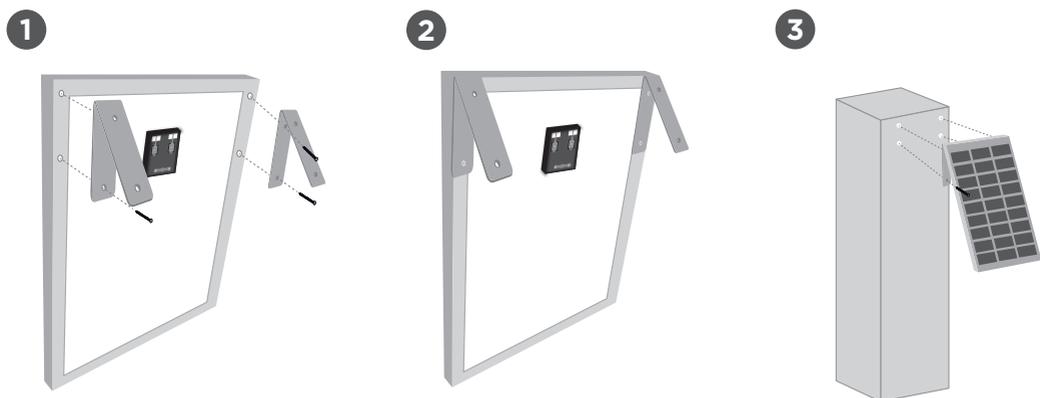

Conservez soigneusement le code-barre ainsi que votre justificatif d'achat, il vous sera demandé pour faire jouer la garantie.

Il est impératif de garder une preuve d'achat durant toute la période de garantie.

INDEX

A - Installing	3
B - General wiring (all brands)	4
C - Wiring with SCS Sentinel gate openers	5
D - Use	7
E - Aide au dépannage	9
F - Warranty	9

A- INSTALLATION

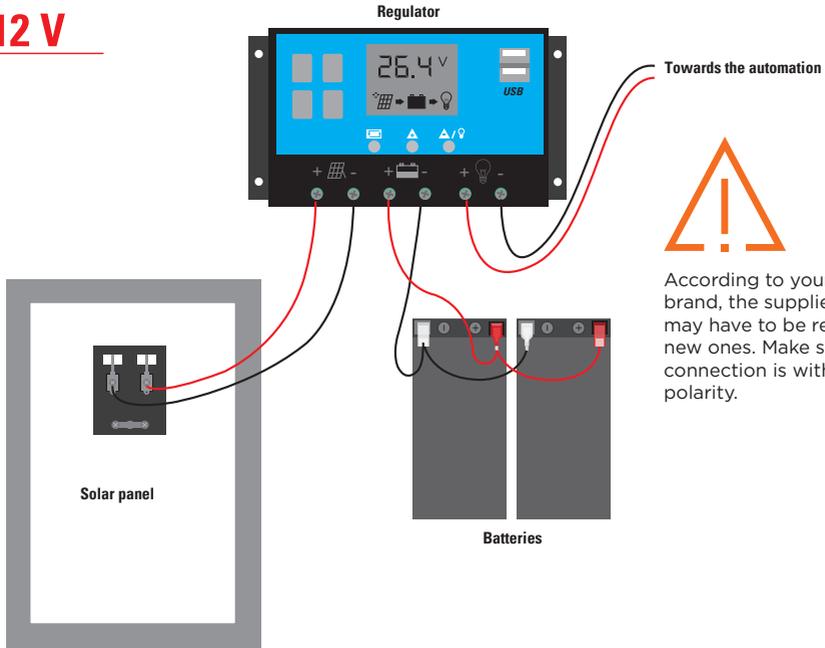

Compulsory
southern
exposure

No shadow is requested.
The solar panel works properly
when there is no shade cast
upon it.

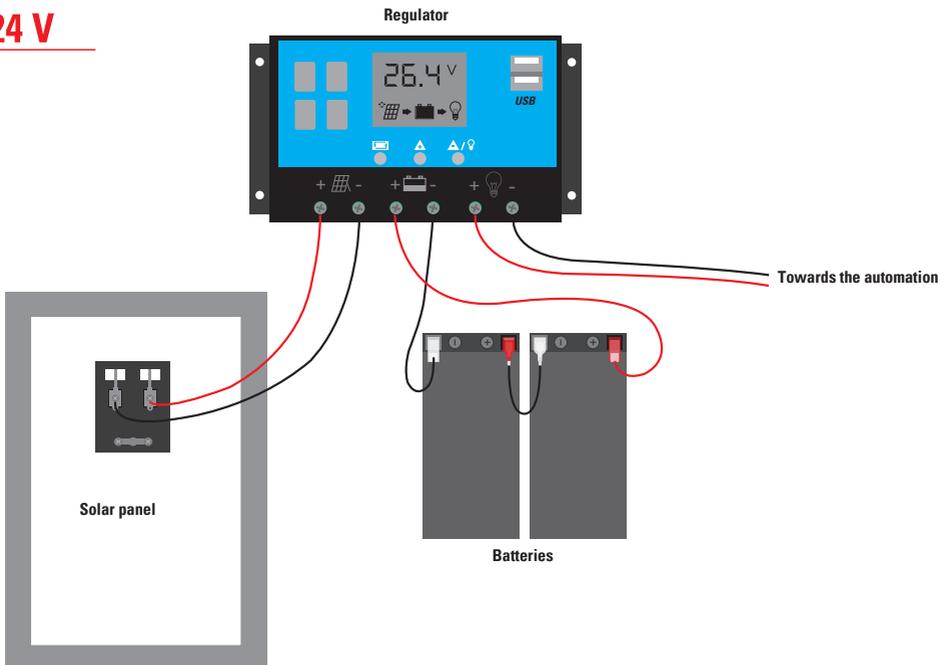

Charging : 8 hours of sun exposure

B- GENERAL WIRING (ALL BRANDS)

12 V

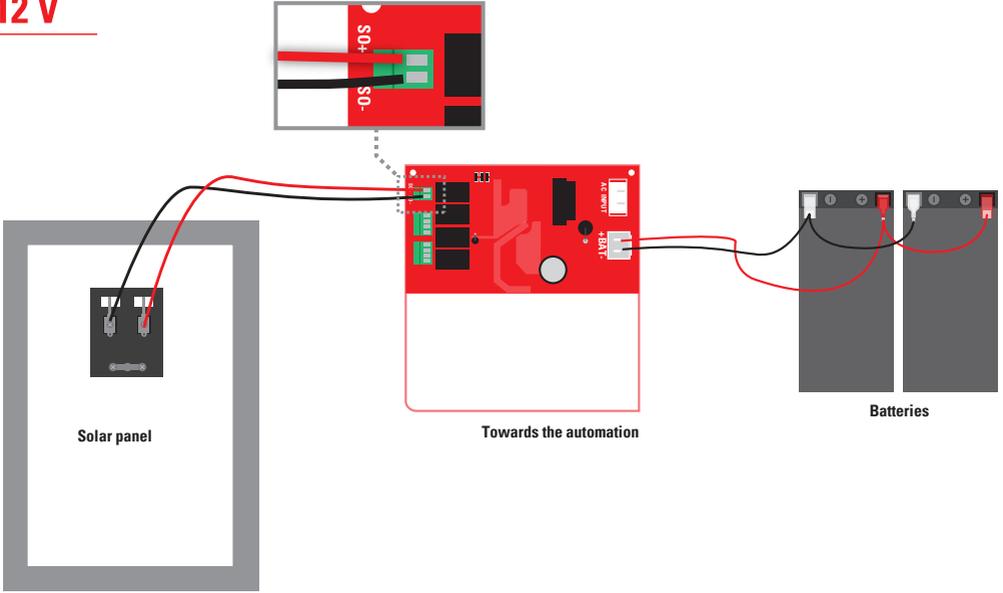

24 V

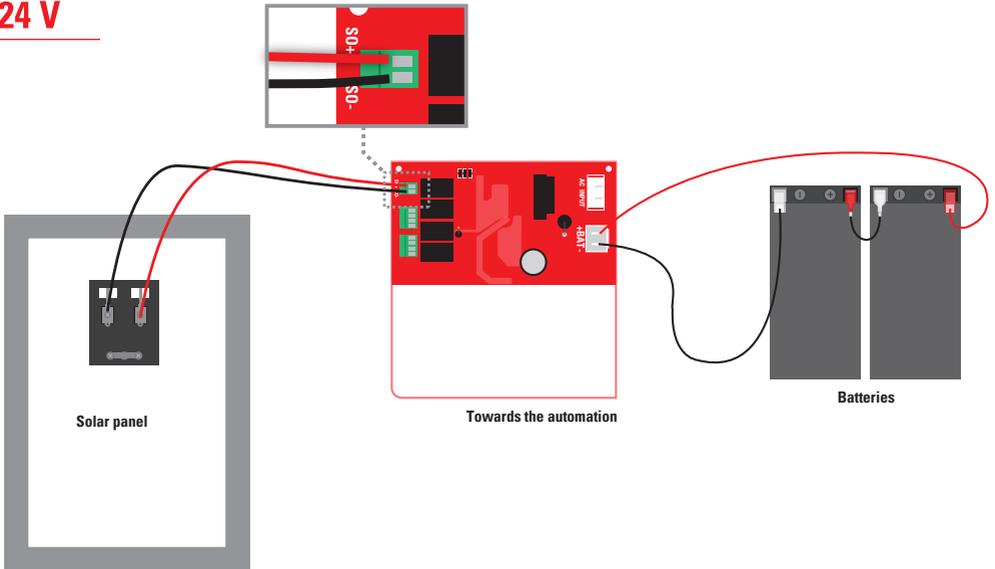

C- WIRING WITH SCS SENTINEL GATE OPENER

Models 1 and 2 - Swing gates - Electronic card P100 PCB1 - P100 PCB2

12 V

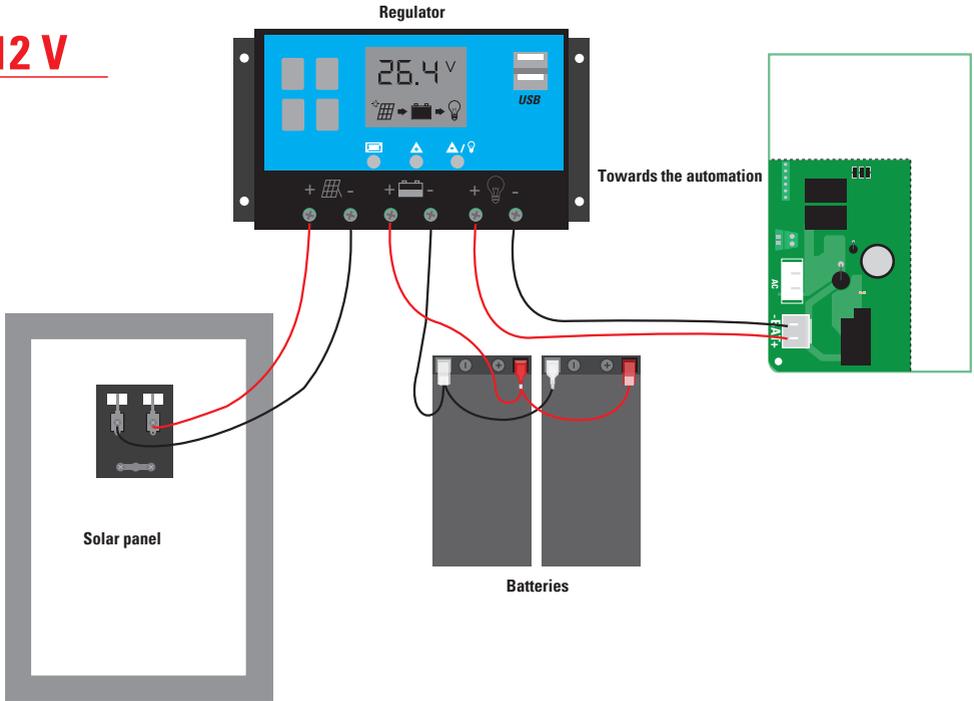

24 V

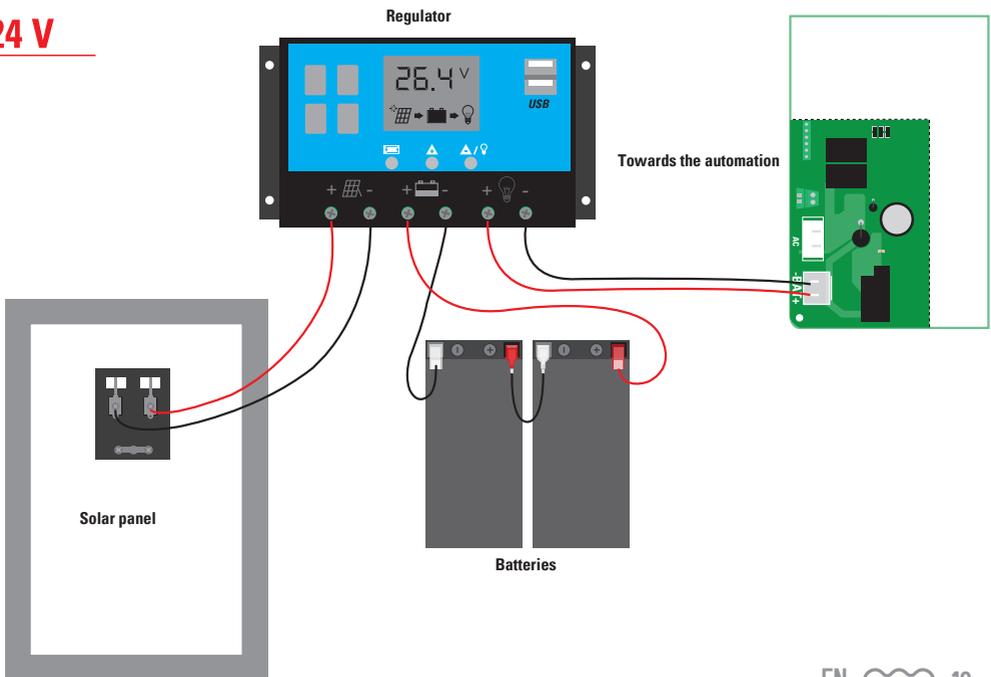

Model 3 - sliding gate - electronic card P501 BH

12 V

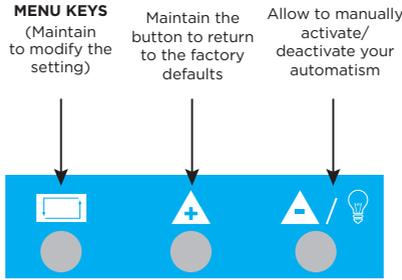

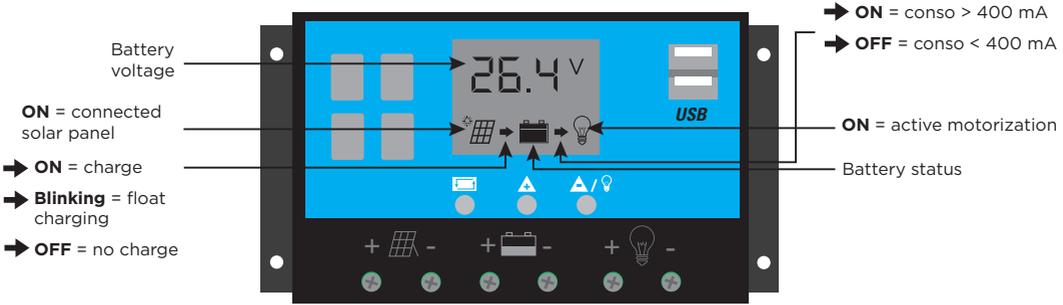

24 V

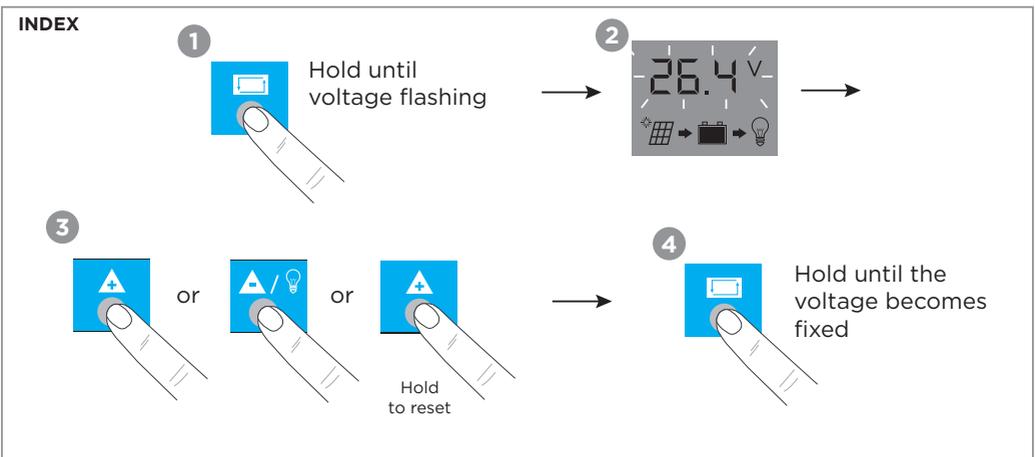

D- USING

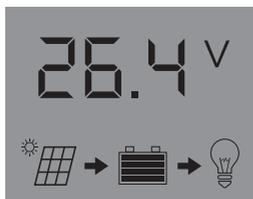

1 Main menu

2 Settings (if necessary)

1 Main screen

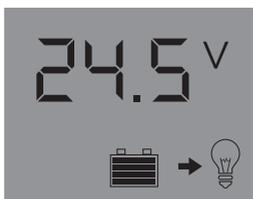

Switch from a setting item to another

2 Voltage threshold of the float charging

See index for settings

3 Activation voltage threshold of the automatism

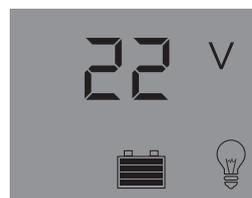

See index for settings

Switch from a setting item to another

4 Deactivation voltage threshold of the automatism

See index for settings

Switch from a setting item to another

5

Do not modify the setting

Switch from a setting item to another

6

See INDEX for settings if changing of batteries model

Switch from a setting item to another

601 = SolarGate batteries
Voltage 14,4V

602 = gel batteries
Voltage 14,2V

603 = flood batteries
Voltage 14,6V

E- TROUBLESHOOTING

Problem	Solution
The battery voltage is low and the indicator light is OFF	Disconnect the automation from the regulator and wait. Only connect the automation again, once the batteries charging is back to normal and improve the sun exposure of the solar panel.
The batteries cannot hold their charge.	Check the stand by power consumption which must reach <40 mA and check the panel sun exposure. There should not be any shade cast upon it.

F- WARRANTY

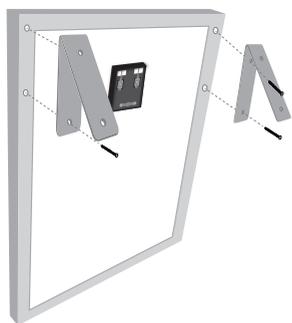

Do not forget to register the warranty within the month following the date of purchase on our website : www.scs-laboutique.com/accountProduct/declaration.
The invoice will be required as proof of purchase date.

4 Soglia della tensione di disattivazione della motorizzazione

Vedere INDEX per regolazioni

Passaggio da un modo all'altro

5

Non modificare questa regolazione

Passaggio da un modo all'altro

6

Vedere INDEX per regolazioni si cambio altro modello di batterie

601 = batterie SolarGate
Tension 14,4V

602 = batterie al gelo
Tension 14,2V

603 = batterie umide
Tension 14,6V

E- AIUTO

Problema	Soluzione
La tensione delle batterie è bassa e la spia è spenta	Disconnettere l'automatismo dal regolatore, quindi attendere. Riconnettere l'automatismo solo quando la carica è ritornata normale, oppure riorientare il pannello solare in modo che sia esposto maggiormente ai raggi del sole.
Le batterie non tengono la carica.	Verificare il consumo di corrente a riposo dell'automatismo, che deve essere <40 mA. Verificare l'esposizione del pannello, che deve essere orientato verso sud e mai all'ombra.

E- ASSISTANZA TELEFONICA

I tecnici del servizio post-vendita sono disponibili al numero :

199 110 000 0.34€/min

In caso di alfunzionamento del prodotto durante l'installazione o pochi giorni dopo la stessa si invita a contattare il servizio clienti rimanendo in prossimità del prodotto in modo da consentire ai nostri tecnici di diagnosticare subito l'origine del problema.

F- GARANZIA

Non dimenticate di registrare sul nostro sito internet la vostra garanzia entro il mese successivo al vostro acquisto:

www.scs-laboutique.com/accountProduct/declaration.

Conservare accuratamente sia il codice a barre che lo scontrino: vi saranno richiesti per far valere la garanzia.

È obbligatorio conservare una prova d'acquisto per tutta la durata della garanzia.

Tension 14,4V

602 = baterías a las heladas
Tension 14,2V

603 = baterías húmedas
Tension 14,6V

E- AYUDA

Problema	Solución
La tensión de las baterías es baja y la luz luminosa está apagada.	Desconectar el automatismo del regulador y esperar. No conectarlo de nuevo sino cuando la carga ha vuelto a un estado normal y reorientar el panel solar más al sol.
Las baterías no soportan la carga.	Verificar el consumo de energía que no debe supercar <40 mA y verificar la exposición al sol y que no haya sombra en el panel.

F- GARANTÍA

Es importante registrar sur garantía durante el mes posterior a su compra en :
www.scs-laboutique.com/accountProduct/declaration.
El recibo o la factura dan prueba de la fecha de compra.
